EDUCATION

Carnegie Mellon University, School of Computer Science — Pittsburgh, PA
Master of Software Engineering, GPA 3.83/4.00 — Dec 2027
Coursework: Introduction to Computer Systems, Machine Learning in Production, Formal Methods

Drexel University, College of Computing & Informatics — Philadelphia, PA
Bachelor of Science in Computer Science — Sep 2017

EXPERIENCE

Peking University Software Engineering Co., Ltd — Beijing, China
Front-end Lead — Dec 2021 - Aug 2026
Frontend Developer — May 2019 - Dec 2021

Frontend lead for a 3-person team in a ~25-person cross-functional product group.

Product ownership and requirements

- Led frontend development for a new enterprise SAST platform, turning source-code and binary analysis engines into configurable workflows for developers, security teams, and engineering leaders.
- Co-defined requirements and modules for a software supply chain monitoring platform, including layered asset discovery across hardware, services, and code repositories, event-driven scans, incremental analysis, and CVE-to-asset correlation.
- Took on requirements and scope for two later products, a code-change impact analysis tool and an artifact repository platform, once frontend automation freed team capacity, while continuing to own frontend delivery.

Workflow design for technical users

- Designed rule and detector workflows for conventional and LLM-assisted analysis, covering CWE/OWASP mappings, severity policies, custom vulnerability definitions, and AI-generated remediation; prioritized bulk false-positive handling: noise, not missed findings, is what makes teams abandon a scanner.
- Adapted workflows for centralized governance, audit and approval, single sign-on, and integration with other developer tools across customer environments.

Engineering and delivery

- Translated interactive call-graph requirements into caching, persistence, and data-model decisions so large dependency graphs could be explored in a multi-user web application.
- Migrated a jQuery frontend to React and Vite with a low-coupling component architecture, and automated build, packaging, and nginx/IIS publishing, cutting a 3-5 minute RDP deployment into a 20-30 second command.

CG Max Design Corp — Remote (Philadelphia, PA)
Web Software Developer — Jan 2018 - Sep 2018

- Supported website and internal-tool upgrades during a platform migration using JavaScript, jQuery, and CSS.

PROJECTS

LAN Remote Desktop & Screen Streaming | Personal project — Mar 2023 - Present

- Designed a zero-install, browser-based LAN remote desktop after benchmarking OBS (~300 ms) and packaged alternatives against three requirements: low latency, cross-platform access, and flexible input remapping.
- Developed a React client, Node.js/WebSocket streaming service, Java input-control service using Robot, and ffmpeg capture pipeline behind a single launcher, reaching ~100 ms latency with ~20 key-mapping profiles.

Aeon Cymatic | Browser-based music production toolkit — Jul 2020 - Present

- Unified three tools spanning successive stages of writing music — a piano-roll sketchpad, a probabilistic drum-beat generator, and a real-time spectrum analyzer — into one React/TypeScript application on Node.js and SQLite, so none of it needs an install or a desktop audio workstation.
- Rebuilt and maintained across six years, self-hosted since 2025; also created an Ableton Live device generating melodies from variable-order Markov models trained on clips open in a Live session.

Relationship Management System | Personal project — Jun 2026 - Present

- Models relationship state and next actions rather than contact records, with a locally hosted LLM parsing captured profiles and drafting outreach asynchronously. React, TypeScript, Node.js, Drizzle ORM, SQLite.

SKILLS

Programming: TypeScript/JavaScript, Python, Java, C#, SQL, HTML/CSS
Frontend: React, Vue, Vite, Ant Design, ECharts, AntV (G6, F2), component architecture
Backend & Delivery: Node.js, Express, SQLite, release automation, Vite, npm scripting, nginx, IIS, Docker
Product Engineering: Developer tools, SAST/SCA workflows, requirements definition, technical documentation
Languages: English (fluent), Mandarin Chinese (native)
